Product aftercare

To maintain your Sam Lander wash basin we recommend the following guidelines:

- In cleaning your basin only use a sponge and water, no harsh chemicals or abrasives should be used.
- Avoid leaving any pastes/gels on the surface for a prolonged time i.e. hand wash gels, toothpastes, soap etc. As this may cause discolouration of the surface.
- Water is an abrasive, as it is to any stone surface. Overtime abrasion will occur, a slight discolouration will be sign of this happening, please contact us if this is the case and we will be happy to mail out a small amount of the sealer for you to wipe onto the area.
